

DAYCARE

INTEGRATION SUCCESS STORY

How Daycare stayed updated with its customer details

Daycare

THE CHALLENGE

Starting on the path of automation

We first set up a detailed meeting with the Daycare team for analysis of their current tech stack, and business processes they wanted to automate.

What did Daycare needed help with?

Daycare was adding customer info manually in their MailChimp account or mailing list of the app. The whole process was time consuming. Thus, they needed help with automating this workflow for error free addition of contacts.

THE SOLUTIONS

How did we approach it?

Our SaaS experts analysed their business requirements before making the integration. The goal was to create something scalable and easy to use. This involved integrating e-conomic to MailChimp.

A new draft invoice when created in e-conomic led to the addition of the contact to the mailing list of MailChimp.

Automations delivered - SaaS apps that helped Daycare grow:

- **MailChimp** - The marketing app was integrated to populate the app with customer details and send automated emails.
- **e-conomic** - The accounting app was integrated to generate invoices and automate invoicing.
